Project background

The Kestrel Yard Depot Extension is a fictional project created to demonstrate how project documents can be organised and searched. It describes a single-storey vehicle maintenance building added to an existing depot, with a reinforced concrete substructure, a steel frame and lightweight cladding. All names, roles, dates, quantities and amounts in this document are invented.

This procedure is one of a small set of fictional project documents. It concerns inspections of the permanent works; other topics are covered by separate documents.

SYNTHETIC DEMO DOCUMENT - fictional project, not for construction use.

Scope

This procedure covers inspections of the permanent works by the Site Manager during construction. It describes how an inspection is requested, how work awaiting inspection is treated, and how the outcome is recorded.

It does not cover inspections by external bodies, laboratory testing of materials or the commissioning of building services. Those activities are outside this demonstration and are not described in any project document.

Terms and definitions

Term	Meaning in this procedure
Contractor	Demo Contractor Ltd (fictional), which carries out the works.
Site Manager	The person who manages the site and inspects the works (fictional role).
Inspection	A visit by the Site Manager to examine an identified part of the works.
Inspection record	The signed form on which the outcome of an inspection is written.
Site inspection form	The form used to ask for an inspection; see section 2.
Covering up	Placing material that hides work, such as concrete, backfill or boards.
Permanent works	The parts of the building that remain when construction ends.

1. Purpose

This procedure sets out how site inspections are requested and recorded.

Inspections give the Site Manager an opportunity to see work before later activities make it inaccessible. Sections 2 to 4 describe the request, the treatment of work awaiting inspection and the record of the outcome. Appendix A lists the revisions of this procedure.

SYNTHETIC DEMO DOCUMENT - fictional project, not for construction use.

2. Inspection requests

The Contractor must give the Site Manager 48 hours' notice of each inspection. Requests are made on the site inspection form.

The form identifies the location, the element of work and the proposed date and time of the inspection. The table below gives examples of work stages at which inspections were requested on this fictional project. It is informational and does not add to this procedure.

Work stage	Example of what is examined
Foundations	Excavated formation and reinforcement
Ground floor slab	Damp-proof membrane, insulation and reinforcement
Drainage	Pipework, bedding and joints
Steel frame	Column bases and bolted connections
Cladding	Fixings, brackets and membranes

Illustrative example (not part of this procedure)
A request for the foul drainage along the north elevation might give the location as gridlines 1 to 4, the element as foul drainage, and a weekday morning as the proposed time. The example shows the kind of information a form carries; its details are invented.

3. Covering up work

Work that is to be inspected must not be covered until the inspection has taken place.

Once work is covered, its condition can usually be seen again only by opening it up, which is slow and can damage finished work. This section keeps the inspection described in section 2 possible while the work is still visible.

SYNTHETIC DEMO DOCUMENT - fictional project, not for construction use.

4. Records

The Site Manager must sign the inspection record on the day of the inspection.

In this demonstration an inspection record holds the information listed in the table below. The records are filed with the project documents.

Record field	Content
Reference	A sequential number, for example IR-012
Location and element	As given on the site inspection form
Date of inspection	The calendar date of the visit
Outcome	Accepted, or not accepted with a short description
Signature	The Site Manager's signature

Appendix A: Revision history

Revision	Issued	Summary
A	14 September 2026	First issue

This document is synthetic. It was written for a software demonstration and does not describe, or claim compliance with, any real construction standard, regulation or contract.
