Field	Detail
Document reference	SSR-01
Document type	Site safety rules
Issue	1 (first issue)
Status	Issued for use on this project (fictional)
Organisation	Demo Contractor Ltd (fictional)
Number of pages	3

Project background

The Kestrel Yard Depot Extension is a fictional project created to demonstrate how project documents can be organised and searched. It describes a single-storey vehicle maintenance building added to an existing depot, with a reinforced concrete substructure, a steel frame and lightweight cladding. All names, roles, dates, quantities and amounts in this document are invented.

About these rules

These rules bring the site-wide safety arrangements for the fictional depot extension together in one short document. Activities with their own procedure are described in that procedure.

The rules relate to the fenced work area, the site office and the access road inside the site boundary. The table on page 3 describes these locations.

SYNTHETIC DEMO DOCUMENT - fictional project, not for construction use.

Terms and definitions

Term	Meaning in these rules
Work area	The fenced area in which construction activities take place.
Moving plant	Self-propelled machines such as excavators, dumpers and telehandlers.
Operative	A person carrying out construction work on the site.
Visitor	A person on site who is not an operative, such as a delivery driver.
Site office	The cabin at the main gate that holds the site records.
PPE	Personal protective equipment.

Personal protective equipment

Safety helmets and safety footwear are required at all times in the work area.
High-visibility vests should be worn near moving plant.

Personal protective equipment reduces the effect of an accident rather than preventing it.
The table below describes the items named in this section for readers unfamiliar with them.
It is informational and adds nothing to the rules.

Item	Description
Safety helmet	A hard hat that protects the head from falling objects and impacts.
Safety footwear	Boots or shoes with protective toecaps and puncture-resistant soles.
High-visibility vest	A fluorescent vest with reflective bands.

Illustrative example (not a rule)
An excavator loading a dumper next to the drainage trench is an example of moving plant at work. The description is invented and shows what the term covers.

SYNTHETIC DEMO DOCUMENT - fictional project, not for construction use.

Site access

All visitors must sign in at the site office before entering the work area.
The Site Manager must brief each new operative on these rules before they start work.

The site office is beside the main gate on the access road. The induction briefing introduces the site layout, the first aid and welfare facilities and the contents of these rules.

Location	Description (informational)
Main gate	Vehicle and pedestrian entrance on the access road.
Site office	Cabin beside the main gate.
Welfare cabin	Canteen and drying room next to the site office.
Work area	Fenced zone around the new building.
Laydown area	Storage for steel and cladding materials, north of the work area.

Illustrative example (not a rule)
A delivery driver bringing steel to the laydown area arrives at the main gate. The table above shows where the site office and the laydown area are. The example is invented.

Issue history

Issue	Issued	Summary
1	14 September 2026	First issue

This document is synthetic. It was written for a software demonstration and does not describe, or claim compliance with, any real construction standard, regulation or contract.
